Team Roles and Tasks Overview

Based on the project requirements for the GameMatch AI application, here are the assigned roles and specific tasks for each team member:

Team Member	Assigned Role	Key Tasks
Ander	Project Manager & Backend Developer	- Oversees the project timeline and communication. - Designs the database schema, defining the flow between user quiz input and backend recommendation engine.
Oihan	Backend & Frontend Developer	- Assists with PHP scripts needed to filter and score the 600-game database. - Works on fetching results from the API to display dynamically on the frontend.
Julen	Backend & Frontend Developer	- Aids in developing logic for the simulated AI processing screen. - Implements SQL queries that fetch the highest-scoring Top 10 games for the logged-in user.
Liz	Designer & Frontend Developer	- Leads UI/UX design, creating visual mockups and translating them to final code. - Employs Tailwind CSS to ensure a polished, modern visual experience.
Sanne	Designer & Frontend Developer	- Supports UI/UX design and wireframing. - Develops interactive DOM elements for the quiz (slide-in animations, hover states, selection highlights).
