

GameMatch AI

- Project Name: GameMatch AI
- Subtitle: An Intelligent Video Game Recommendation System
- Team Members: Ander, Oihan, Julen, Liss, and Sanne
- Aesthetic: Modern "Gamer" dark theme with violet accents
- Purpose: Title slide for a 15-minute presentation

A detailed black and white illustration of a person with dark hair, wearing a hoodie and pants, sitting cross-legged on a massive, towering stack of video game boxes. They are holding a handheld gaming device (resembling a Game Boy) up towards their face, playing a game. The stack of boxes is so high it reaches the ceiling, with various titles visible such as "POPPERY", "B.M.P. BATTLE LATCHES", "MURDER MURDER", "COTTON", "PASTEL", "GOSICK", "DISCHORD", "MUTANT", "SURRENDER", "LATCHES", "MURDER MURDER", "COTTON", "PASTEL", "GOSICK", "DISCHORD", "MUTANT", "SURRENDER". Above the person, there are two shelves filled with more game boxes. A small sign with the number "1" is mounted on the wall above the shelves. The entire scene is set against a plain background, emphasizing the vast collection of games.

- 01 Gamers often face "choice paralysis" when searching for new games.
 - 02 This project was developed by Ander, Oihan, Julen, Liss, and Sanne.
 - 03 GameMatch AI solves this with a smart recommendation quiz system.
 - 04 The application processes preferences to suggest a single, perfect match.

Backend Architecture Overview

- MySQL database with nearly 600 curated games
- Relational tables organize users, games, genres, and platforms
- PHP PDO is used to securely connect to the database
- Prepared statements prevent SQL injection and enhance security

AI Logic: Filter, Score, Sort

- System first filters games incompatible with user's device.
- Remaining games are scored based on time and mood preferences.
- Time Match adds two points; Vibe Match adds three points.
- The game with the highest match score is the perfect suggestion.

UI/UX Design Stack

- The visual design uses a dark mode 'Gamer' aesthetic
- A dark Slate 900 palette with Violet 500 neon accents creates the theme
- Vanilla CSS handles modular styling, responsive grids, and effects
- JavaScript manages state and non-reloading smooth quiz transitions

Results & Future

- Project successfully ranks and suggests the perfect game match.
- The team overcame challenges like database design and API security.
- Future plans include integrating external APIs for live game data.
- Explore advanced AI models to improve recommendation accuracy over time.

The Role of AI in Modern Healthcare

Revolutionizing Diagnostics, Treatment, and Patient Care

Thank You!

- Visit GameMatch AI to find your perfect game.
- Developed by Ander, Oihan, Julen, Liss, and Sanne.
- Thank you for your time, we are open to questions.
