3. Team Roles & Task Distribution

Overview

A key element of successfully delivering **GameMatch AI** is efficient task distribution among the 5 team members. We have aligned team members to specific roles based on the project's backend (PHP/MySQL) and frontend (HTML/Vanilla JS/Tailwind) requirements.

Assigned Roles

- **Project Manager:** Coordinates the project, ensures milestones are met, and bridges the gap between frontend design and backend logic.
- **Backend Developer:** Responsible for database management (MySQL: queries, inserts, schema updates) and server-side processing (PHP API endpoints).
- **Frontend Developer:** Builds the user-facing features, handles DOM manipulation (Vanilla JS), and builds the interactive quiz logic.
- **Designer:** Focuses on visual identity, the overall UI/UX, and ensures consistent styling across all components using Tailwind CSS.

Team Assignments

1. **Ander:** *Project Manager & Backend Developer*
 - Oversees the project timeline and communication.
 - Designs the database schema, especially defining the flow between the user quiz input and the backend recommendation engine.
2. **Oihan:** *Backend & Frontend Developer*

- Assists Ander with the PHP scripts needed to filter and score the 600-game database.
- Works on fetching the results from the API to display them dynamically on the front end.

3. **Julen:** *Backend & Frontend Developer*

- Aids in developing the logic for the simulated AI processing screen.
- Implements SQL queries that fetch the highest-scoring Top 10 games specifically for the logged-in user.

4. **Liz:** *Designer & Frontend Developer*

- Leads the UI/UX design, creating visual mockups and translating them to the final code.
- Employs Tailwind CSS to ensure a polished, modern, and engaging visual experience.

5. **Mius:** *Designer & Frontend Developer*

- Supports UI/UX design and wireframing.
- Develops the interactive DOM elements for the quiz (slide-in animations, hover states, selection highlights).

Content for Presentation Slides (Task 3)

- **Slide 3.1: Team Composition:** A brief introduction to the 5 members: Ander, Julen, Oihan, Liz, Mius.
- **Slide 3.2: Project Management and Backend Architecture:** Highlight Ander's role as the project manager, steering the direction and overseeing the database design (MySQL).
- **Slide 3.3: Backend / Frontend Integration:** Describe how Oihan and Julen connect the PHP logic with the JavaScript frontend.
- **Slide 3.4: Design and UI Experience:** Detail how Liz and Mius ensure the web app is visually stunning out of the box using modern CSS techniques.
